EDUCATION

- Virginia Tech – Bachelor of Science in Meteorology May 2016 Geography Minor/ GIS Focus

EXPERIENCE

Zenimax Online Studios - Microsoft

DevOps Engineer

Remote

January 2023 - July 2025

- Designed and built development and production Kubernetes clusters to support a scalable microservices architecture
- Developed custom Kubernetes controllers in Go to automate Kubernetes workflows related to game scaling and extended cluster functionality
- Architected new deployment strategies for Kubernetes software and implemented a GitOps style deployment strategy using Spinnaker, enabling automated CI/CD pipelines
- Deployed, designed, and managed game infrastructure in Azure using repeatable Terraform and Pulumi code
- Created an infrastructure as code system for managing TeamCity jobs with Kotlin, significantly reduced time to spin up new jobs and enabled consistency between jobs in different environments
- Collaborated with various teams to create Datadog monitoring system for Kubernetes services

Grabango

DevOps Engineer

Remote

March 2022 - September 2023

- Took complete ownership of Jenkins CI/CD stack from Systems team and became CI/CD subject matter expert
- Redesigned and rebuilt the Jenkins CI stack using Terraform and SALT, significantly reducing outages
- Implemented automation and scaling measures on Kubernetes clusters resulting in annual cost savings of \$250,000
- Wrote new build libraries to behave as functions which made builds more efficient
- Created pipelines in Jenkins for rapid deployment of software for all engineering teams
- Collaborated with teams to design Kubernetes clusters and expanded existing clusters by building new node pools
- Created deployment automations resulting in weekly savings of engineering hours
- Participated in on-call rotations, managed incidents, and resolved issues within company's Service Level Agreements
- Led the pitch, design, and implementation of a project plan to migrate to Cloudsmith's unified artifact storage system
- Crafted a streamlined pipeline for Ansible infrastructure which optimized linting, validation, deployment, and logging processes across customer sites and peripheral devices; Resulted in significant weekly time savings for engineers

Bethesda Softworks - Microsoft

Senior Network Operations Center Administrator

Rockville, MD

March 2019 - March 2022

- Monitored and maintained network and cloud operations for multiple game studios maximizing uptime of products
- Fixed redundant processes and developed efficient automated backend tools
- Designed Splunk and New Relic dashboards and automated KPI reports with Python
- Served as primary point of escalation for other system admins on my team for tier 2 and tier 3 problems and tickets
- Assisted teams with CI/CD processes in AnthillPro, Jenkins, TeamCity, and AWS CodeDeploy
- Trained and acclimated new admins to the team and ensure their success within Bethesda
- Rotated onto Site Reliability Engineering teams to resolve network and code issues
- Worked with studios/teams to update and create Knowledge Base Items, Standard Operating Procedures, Service Level Agreements, and Problem Records in Confluence and Jira Service Management (JSM)
- Managed blameless postmortems for major incidents
- Resolved issues with Kubernetes clusters
- Spearheaded development and migration of Jira Service Management ticketing system from legacy system
- Documented all tickets, actions and changes made to systems within JSM using ITIL principles

National Oceanic and Atmospheric Administration NOAA/ CSE

Network Control Facility NCF AWIPS Systems Engineer/Administrator

Silver Spring, MD

February 2017 - March 2019

- Provided tier 1 and 2 technical support to over 120 National Weather Service forecast offices in a 24/7 environment for Advanced Weather Interactive Processing System
- Resolved various client software issues to ensure the National Weather Service's mission of protecting life and property
- Utilized Remedy Software Suite and HP Operations Manager to thoroughly document and track all actions taken to reach solutions while simultaneously exceeding Service Level Agreements provided by managers and the NWS
- Assisted with patches and installs of Red Hat Enterprise Linux 6 and 7 (RHEL 6 & 7), hardware upgrades, backup and recovery of Postgres databases, and ensured the Satellite Broadcast Network was functional
- Managed and maintained RHEL packages such as Apache, Samba, and Rsync

CERTIFICATIONS

AWS Certified Cloud Practitioner Certification
